Profile

Industrial Civil Engineer specializing in Business Analytics, with more than **4 years of experience working with data** in financial consulting, insurance, banking, and pensions. As part of the Analytics and Data area, I contribute throughout the full data lifecycle with a business-oriented approach: I understand and prioritize business needs and then design, implement, quality-control, and deliver structured solutions in cloud environments. I am motivated by solving complex problems that impact decision-making while deepening my expertise in data architecture, data science, and AI through my portfolio.

Experience

Digital Analytics Analyst Jan 2024 – Present

MetLife | Analytics and Data *Santiago, Chile*

- Led and implemented **six data pipelines** for web, app, and chatbot channels, capturing JSON events, consolidating them in Adobe Data Warehouse, and automating their delivery to SQL and Power BI to measure engagement, visits, and experience for Digital Management.
- Adapted and validated JSON/API events in QA and production, coordinating tests with Backend and Frontend teams and loads into the Data Warehouse, with quality, traceability, and idempotency controls for more than **15 stakeholders** across Product Owners, Product, BI, and Business.
- Built the end-to-end data lifecycle for digital health, orchestrating with Azure Data Factory the integration of JSON events from web and app, their storage in a Data Lake under a medallion architecture, and their publication in Azure SQL and Power BI; following the app launch, adoption increased from **10% annually on web to 20% monthly**.
- Implemented the integration of web and app surveys in Azure Data Factory, developing the provider's REST API consumption, authentication, and JSON response processing in Python; standardized variables and modeled CSAT/NPS in Databricks SQL to identify detractors and reduce them from **more than 15% to approximately 5%**.
- Optimized the facial biometrics ETL flow using Python, REST/JSON APIs, and SQL Server, reconciling login, facial scan, ID card, and customer-type events to correct duplicates and data loss; raised the OKR above **80% in six months** and reduced **provider-related costs by 50%**.

Data Consultant Jun 2023 – Dec 2023

Compite *Chile*

- Participated in **more than 15 financial consulting projects**, integrating commercial, financial, and operational information to build business analyses and recommendations.

Project Engineer Jun 2022 – Jun 2023

- Presented **more than 10 financial analyses** to executive committees, boards of directors, and clients, supporting business models, commercial management, and data-driven decisions.

Trainee Engineer Jan 2022 – Jun 2022

- Developed a layout and picking optimization model using mixed-integer programming in Python, reducing estimated delivery delays by **20%**.

Projects

Azure Banking Analytics Platform *ADF, Databricks, PySpark, Azure SQL* GitHub

- Centralized CSV, JSON, and API banking sources in a medallion architecture, automating their transformation and publication in a star schema for Power BI with data quality controls and duplicate-free reruns.

Automated Taxpayer Classification *Python, pytest, Data Quality* Presentation

- Developed a pipeline that classifies taxpayers based on their Chilean tax ID and economic activities, reducing manual review and ensuring traceable results through quarantine, reconciliation, idempotency, and testing.

Certifications

- **Microsoft Certified: Azure Fundamentals (AZ-900)**
- **Data Engineer – DataCamp**
- **Databricks – DataCamp**

Technical Skills

Languages	:	Python, SQL, JavaScript
Libraries	:	pandas, NumPy, requests, datetime
Processing	:	Azure Data Factory, ADLS Gen2, Databricks, PySpark, Delta Lake, Azure SQL
Integration	:	ETL/ELT, REST API, JSON, CSV, Parquet, Delta, SFTP
Data Modeling	:	medallion architecture, dimensional modeling
Data Quality	:	pytest, schema validation, reconciliation, traceability, idempotency
Tools	:	Azure, GCP, AWS, Git, CI/CD, Codex, Airflow, Snowflake, BigQuery

Education

Universidad Adolfo Ibáñez Chile
Industrial Civil Engineering, specialization in Business Analytics *2015 – 2021*
